

At the moment we are looking for a positive and observant person to join our team as **Medical Writer**.

### **Job description**

Medical writers are responsible for creating medical documents that provide accurate details about medical information and products. Medical writers must combine their knowledge of science with their understanding of research and writing to present information at the right level for their target audience. They may write for a variety of audiences for a variety of purposes, ranging from preparing documents for submission to regulatory bodies on behalf of pharmaceutical companies, to writing articles for biomedical journals read by professionals in the field of healthcare

### **Main functions**

- Producing regulatory documents related to the approval of medicinal products in liaison with government regulation agencies (clinical study reports, clinical study protocols and amendments, Informed Consent Forms, Investigator Brochures, CTD Clinical and Nonclinical overviews and summaries) for a variety of therapeutic areas;
- Providing clinical/regulatory document support and advanced scientific writing expertise;
- Preparing research articles in medical journals;
- Analysis, interpretation and review of research data and (or) medical documents.

### **Other functions**

- Organization and conducting Package leaflet readability tests;
- Revision of various documents;
- Translations.

### **Experience, required skills and competencies**

- Biomedical science degree (minimal requirement is Master of sciences degree; PhD degree would be an advantage);
- Relevant experience in pharmaceutical industry or scientific research;
- Excellent command of the English language, both oral and written, with strong scientific understanding;
- Good Russian knowledge (both oral and written ) would be an advantage;
- Working knowledge of statistical concepts and techniques;
- Ability to see relationships between ideas and organize complex information, to interpret and present data in a logical manner;
- Critical thinking skills and superior attention to details;
- Ability to effectively communicate with various people involved in the research, good time management skills, and able to meet deadlines.
